

Cambridge IGCSE™

COMPUTER SCIENCE

Paper 2 Algorithms, Programming and Logic MARK SCHEME Maximum Mark: 75 0478/22 October/November 2024

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2024 series for most Cambridge IGCSE, Cambridge International A and AS Level components, and some Cambridge O Level components.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptions for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always whole marks (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

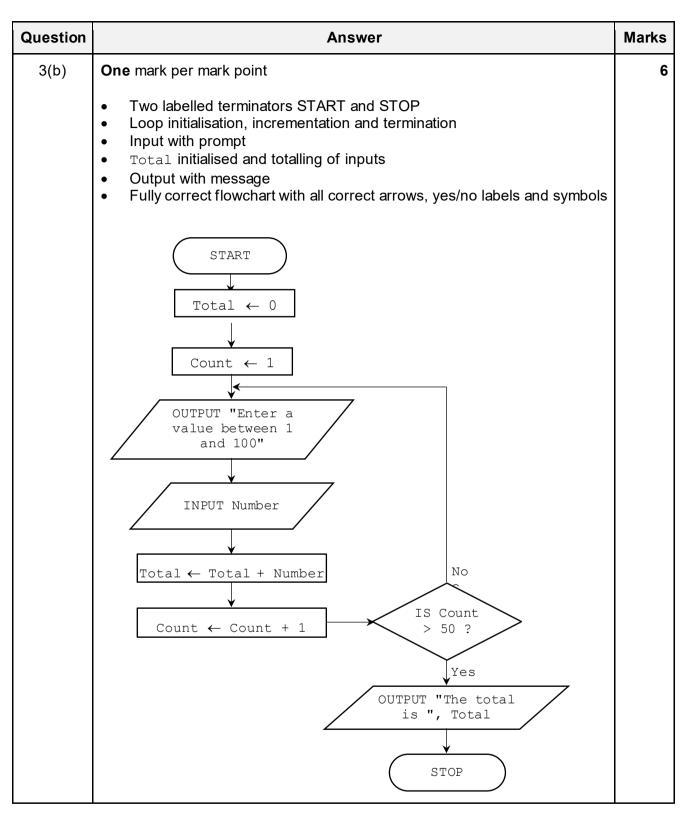

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Question	Answer	Marks
1	C	1

Question	Answer	Marks
2	C	1

Question	Answer	Marks
3(a)	One mark for each correct line	4
	Flowchart symbol Purpose	
	subroutine	
	process	
	flow	
	decision	
	terminator	

Question	Answer	Marks
4(a)	One mark per mark point	5
	• Line 02 / DECLARE Counter : STRING should be DECLARE Counter : INTEGER	
	 Line 09 / Temp ← TRUE should be Swapped ← TRUE 	
	 Line 10 / WHILE Swapped = TRUE OR Pass <= Limit - 1 DO should be WHILE Swapped = TRUE AND Pass <= Limit - 1 DO 	
	 Line 17 / ItemList[Counter] ← Temp should be ItemList[Counter + 1] ← Temp 	
	• Line 19/ENDCASE should be ENDIF	
	Correct algorithm:	
	<pre>01 DECLARE ItemList : ARRAY[1:100] OF STRING 02 DECLARE Counter : INTEGER 03 DECLARE Limit : INTEGER 04 DECLARE Pass : INTEGER 05 DECLARE Swapped : BOOLEAN 06 DECLARE Temp : STRING 07 Limit ← 100</pre>	
	08 Pass ← 1 09 Swapped ← TRUE	
	10 WHILE Swapped = TRUE AND Pass <= Limit - 1 DO	
	<pre>11 Swapped ← FALSE 12 FOR Counter ← 1 TO Limit - Pass 13 IF ItemList[Counter] > ItemList[Counter + 1]</pre>	
	14 THEN	
	15Temp ← ItemList[Counter]16ItemList[Counter] ← ItemList[Counter + 1]	
	17 ItemList[Counter + 1] ← Temp	
	18 Swapped ← TRUE 19 ENDIF	
	20 Pass ← Pass + 1 21 NEXT Counter 22 ENDWHILE	
4(b)	One mark per mark point (max three)	3
	 The use of a flag (set initially to FALSE) to show if a swap has been made (during the current iteration) to stop the loop if it has been sorted The reduction in the limit of the (inner) loop after each iteration (of the loop) to reduce the number of comparisons / iterations required 	

Question	Answer	Marks
5(a)	One mark per mark point (max one)	1
	 Design Coding Testing 	
5(b)	One mark per mark point (max three)	3
	 Abstraction Discard/remove irrelevant information / hiding complexities / keeping the key elements of the problem Decomposition of the problem Breaking the problem into inputs, processes and outputs Identification of the problem 	
	 Identification of the requirements of the solution to the problem Research into the problem by data collection Example of data collection 	

Question	Answer						
6	One mark for naming the type of check and one mark for an expansion (max two)						
	 Visual check looking at the data that has been entered and either confirming it is correct or showing / correcting errors. 						
	OR						
	 Double entry check // Data entered twice data is entered twice and the two sets of data are compared (by the computer). If they don't match, an error has been input, so re-entry is requested.

Question	Answer	Marks				
12	 AO2 (maximum 9 marks) AO3 (maximum 6 marks) 	15				
	Data Structures required with names as given in the scenario: Arrays or lists <u>Rooms[]</u> , <u>Dimensions[]</u>					
	Variables Number					
	Requirements (techniques):					
	 R1 Input and store number of rooms, the names of the rooms and their dimensions, including validation of number of rooms (input with prompts, (nested) iteration, use of variables, 1D and 2D arrays, validation). R2 Calculate and store the area of each room, the total area of the house and the average room area rounded to two decimal places. Find the smallest and largest rooms (calculation, totalling, rounding, finding) 					
	 maximum and minimum values, iteration). R3 Output the results, including contents of the arrays and the calculated data (iteration, output). 					
	Example 15-mark answer in pseudocode					
	<pre>// input and validation of number of rooms REPEAT OUTPUT "How many rooms are in your house (enter a</pre>					
	IF Number < 3 OR Number > 20 THEN OUTPUT "The number of rooms must be between 3 and 20 inclusive, please try again" ENDIF					
	UNTIL Number >= 3 AND Number <= 20					
	<pre>// input of room names and dimensions - could be more than one loop FOR InLoop ← 1 TO Number OUTPUT "Enter the name of room ", InLoop INPUT Rooms[InLoop] OUTPUT "Enter the length of the room in metres" INPUT Dimensions[InLoop, 1] OUTPUT "Enter the width of the room in metres" INPUT Dimensions[InLoop, 2] Dimensions[InLoop, 3] ← ROUND(Dimensions[InLoop, 1] * Dimensions[InLoop, 2], 2)</pre>					
	NEXT InLoop // calculates total area and average area - rounded values have been stored					
	<pre>Values have been stored TotArea ← 0 FOR Total ← 1 TO Number TotArea ← TotArea + Dimensions[Total, 3] NEXT Total AvArea ← ROUND(TotArea / Number, 2)</pre>					

0478/22

Question	Answer	Marks
12	<pre>// finding largest and smallest rooms Larea ← 0 Sarea ← 100000 Lindex ← 1 Sindex ← 1 FOR Count ← 1 TO Number IF Dimensions[Count, 3] > Larea THEN Larea ← Dimensions[Count, 3] Lindex ← Count ENDIF IF Dimensions[Count, 3] < Sarea THEN Sarea ← Dimensions[Count, 3] Sindex ← Count ENDIF NEXT Count</pre>	
	<pre>// outputting the results FOR OutLoop ← 1 TO Number OUTPUT "Room: ", Rooms[Outloop] OUTPUT "Length: ", Dimensions[OutLoop, 1], " metres" OUTPUT "Width: ", Dimensions[OutLoop, 2], " metres" OUTPUT "Area: ", Dimensions[OutLoop, 3], " square metres" Next OutLoop OUTPUT "The largest room is: ", Rooms[Lindex] OUTPUT "The smallest room is: ", Rooms[Sindex] OUTPUT "The total area of the house is: ", TotArea, " square metres" OUTPUT "The average area of the rooms is: ", AvArea, " square metres"</pre>
