

## **Cambridge IGCSE**<sup>™</sup>

CANDIDATE NAME					
CENTRE NUMBER			CANDIDATE NUMBER		

CHEMISTRY 0620/43

Paper 4 Theory (Extended)

October/November 2023

1 hour 15 minutes

You must answer on the question paper.

No additional materials are needed.

## **INSTRUCTIONS**

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

## **INFORMATION**

- The total mark for this paper is 80.
- The number of marks for each question or part question is shown in brackets [ ].
- The Periodic Table is printed in the question paper.

1 A list of substances is shown.

barium nitrate
carbon monoxide
hydrated cobalt(II) chloride
copper(II) oxide
anhydrous copper(II) sulfate
ethane
potassium iodide
propene
sodium bromide
sulfur dioxide
zinc oxide

Answer the following questions using only the substances from the list. Each substance may be used once, more than once or not at all.

Give the name of the substance that:

(a)	gives a lilac colour in a flame test
	[1]
(b)	forms a cream precipitate when its aqueous solution reacts with acidified aqueous silver nitrate[1]
(c)	is an acidic oxide
(d)	is an unsaturated hydrocarbon[1]
(e)	is a product of incomplete combustion of fossil fuels[1]
(f)	is used to test for the presence of water.  [1]
	[Total: 6]

2 Table 2.1 gives information about particles A, B, C, D, E and F.

Table 2.1

particle	number of electrons	number of neutrons	number of protons
Α	5	6	5
В	10	11	10
С	10	14	13
D	18	17	16
E	18	17	17
F	15	16	15

(a)	Giv	ve the letters of <b>all</b> the particles which are:	
	(i)	atoms	
			[1]
	(ii)	ions with a charge of 2–	
			[1]
	(iii)	cations.	
			[1]
(b)	Sta	ate the atomic number of <b>A</b> .	
			[1]
(c)	De	termine the number of nucleons in <b>D</b> .	
(0)	De		[1 <sup>-</sup>
			L .
(d)	Sta	ate the electronic configuration of <b>D</b> .	
			[1]
(e)	Sta	ate the group number of <b>F</b> .	
			[1]
/ <b>f</b> \	S+c	ate the period number of <b>B</b> .	
(f)		tte the period number of <b>b</b> .	[1.
			L'.

- 3 This question is about nitrogen and some of its compounds.
  - (a) Nitrogen is converted into ammonia, NH<sub>3</sub>, in the Haber process.

(	O	Nitrogen	is	obtained	from	air.
۸	\ <del>-</del> /	,		00000000		٠

State the percentage of nitrogen in clean, dry air.
---

[	[1	

(ii) State the source of hydrogen for the Haber process.

F 4 3	ı
111	ı
 ויו	ı

(iii) Complete the dot-and-cross diagram in Fig. 3.1 for a molecule of ammonia.

Show the outer shell electrons only.

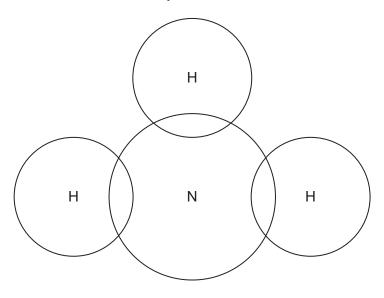

Fig. 3.1

[2]

(iv)	Write a chemical equation for the reaction occurring in the Haber process and give the
	typical reaction conditions. Include units where appropriate.

chemical equation	
-------------------	--

reaction conditions:

pressure .....

catalyst .....[5]

(b) Ammonia is converted into nitric acid.

The first stage of this conversion uses a catalyst and occurs at a temperature of 900 °C and a pressure of 5 atmospheres.

$$4NH_3(g) + 5O_2(g) \rightleftharpoons 4NO(g) + 6H_2O(g)$$

The forward reaction is exothermic.

(i) Suggest which of the following elements is most likely to be used as a catalyst. Draw a circle around your answer.

	calcium le	ad platinum	sodium	sulfur	[1]
(ii)	State the oxidation num	ber of nitrogen in:			
	NH <sub>3</sub>				
	NO				[2]
(iii)	Use your answer to (ii) or reduction.	to explain whether	the nitrogen ir	n ammonia undergoes	oxidation
					[1]
(iv)	Complete Table 3.1 usir	ng the words <b>incre</b>	ases, decreas	es or no change.	
		Table 3.1			
		effect on the ed		effect on the rate of the forward reaction	
d	ecreasing the pressure				
de	creasing the temperature			decreases	
	removing the catalyst			decreases	
					[4]
(v)	Decreasing the tempera	iture causes the ra	te of the forwar	d reaction to decreas	e.
	Explain, using collision temperature.	theory, why the ra	ate of the reac	tion is slower at the	decreased

(c) In the second stage, nitric acid is produced.

Balance the symbol equation for this reaction.

....NO + ....O<sub>2</sub> + ....H<sub>2</sub>O 
$$\rightarrow$$
 ....HNO<sub>3</sub> [1]

[Total: 21]

- 4 This question is about sulfuric acid and salts that are made from sulfuric acid.
  - (a) Zinc reacts with dilute sulfuric acid. Aqueous zinc sulfate is one of the products.

Powdered zinc is added to dilute sulfuric acid. The mixture is stirred. More zinc is added, with stirring, until the zinc is in excess.

$$Zn(s) + H_2SO_4(aq) \rightarrow ZnSO_4(aq) + H_2(g)$$

The mixture is then filtered.

	(i)	Name the limiting reactant.
		[1]
	(ii)	State two <b>observations</b> that indicate the zinc is in excess.
		1
		2[2]
	(iii)	Name the filtrate.
		[1]
(	(iv)	Name <b>two</b> compounds which both react with dilute sulfuric acid to produce aqueous zinc sulfate.
		1
		2[2]
(b)		c sulfate crystals are produced by heating aqueous zinc sulfate until a saturated solution is ned. When the saturated solution cools down, crystals of zinc sulfate start to form.
	(i)	State what is meant by the term saturated solution.
		[2]
	(ii)	Explain why crystals form when the saturated solution cools down.

)	Nic	kel(I	Sulfate crystals contain water of crystallisation.
	Wh	en ni	ickel(II) sulfate crystals, NiSO <sub>4</sub> • <b>x</b> H <sub>2</sub> O, are heated, they give off water.
			$NiSO_4$ • $\mathbf{x}H_2O(s) \rightarrow NiSO_4(s) + \mathbf{x}H_2O(g)$
	A st	tuder	nt carries out an experiment to determine the value of <b>x</b> in NiSO <sub>4</sub> • <b>x</b> H <sub>2</sub> O.
	ste	p 1	Nickel(II) sulfate crystals are weighed.
	ste	p 2	Nickel(II) sulfate crystals are heated.
	ste	р 3	The remaining solid is allowed to cool and is then weighed.
	ste	p 4	The remaining solid is heated again, allowed to cool and is then weighed.
	ste	p 5	Step 4 is repeated until there is no change in mass.
	(i)	Stat	te the term used to describe crystals that contain water of crystallisation.
			[1]
	(ii)	Stat	te why <b>step 4</b> is repeated until there is no change in mass.
			[1]
(	(iii)		an experiment, 0.454 g of nickel(II) sulfate crystals, NiSO <sub>4</sub> • $\mathbf{x}$ H <sub>2</sub> O, is used. The mass of hydrous nickel(II) sulfate, NiSO <sub>4</sub> , remaining is 0.310 g.
		[ <i>M</i> <sub>r</sub> :	NiSO <sub>4</sub> , 155; H <sub>2</sub> O, 18]
		Det	ermine the value of <b>x</b> in NiSO <sub>4</sub> • <b>x</b> H <sub>2</sub> O.
		Use	e the following steps.
		•	Calculate the number of moles of NiSO <sub>4</sub> remaining.
		•	$\label{eq:moles of NiSO} \mbox{moles of NiSO}_4 =$ Calculate the mass of $\mbox{H}_2\mbox{O}$ given off.
		•	$\label{eq:mass} \text{mass of H}_2\text{O} = g$ Calculate the number of moles of $\text{H}_2\text{O}$ given off.
			moles of $H_2O = \dots$

• Calculate the value of **x**.

5

Th	nis qu	estion is about iron.	
(a	) (i)	Describe the bonding in a metallic element such as iron.	
		You may include a labelled diagram as part of your answer.	
			[3]
	(ii)	Explain why iron conducts electricity when it is solid.	
			[1]

(b) Iron is extracted from hematite in the blast furnace as shown in Fig. 5.1.

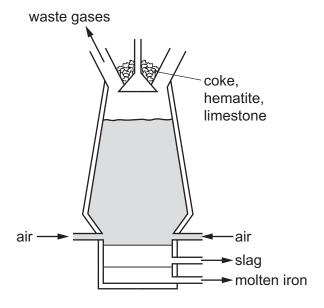

Fig. 5.1

(i)	Give <b>two</b> reasons why coke is added to the blast furnace.	
	1	
	2	
		[2]
(ii)	Explain how limestone removes the impurities in the hematite.	
		[2]
(iii)	Hematite contains iron(III) oxide.	
	Write a symbol equation for the conversion of iron(III) oxide to iron in the blast furnace	<b>)</b> .
		[2]
(iv)	Suggest why the iron produced in the blast furnace is molten.	
		[1]

(c)	Mos	st iron is converted into steel. Steel is an alloy.	
	Ste	el is more useful than pure iron because it is harder and stronger.	
	Ехр	plain why the structure of alloys causes them to be harder and stronger than pur	e metals.
	You	ı may include a diagram as part of your answer.	
			[2]
(d)	Iron	n forms rust.	
	Rus	sting is prevented by coating iron with zinc.	
	(i)	Name the substances that react with iron to form rust.	
			[1]
	(ii)	Name the process in which zinc is used to coat iron to prevent rusting.	
			[1]
(	iii)	Explain how the coating of zinc prevents rusting if the zinc is <b>not</b> scratched.	
			[1]
(	iv)	When zinc is scratched the iron becomes exposed.	
		Explain how the zinc continues to prevent rusting.	
			[2]
			[Total: 18]

6	(a)	Est	ers are members of a homologous series of organic compounds.	
		Giv	e <b>two</b> characteristics that are the <b>same</b> for all members of a homologous series.	
		1		
		2		
				[2]
	(b)	Est	er <b>X</b> has the structure shown in Fig. 6.1.	
			H H O H H H H O C C C H H H H H H H H H	
			Fig. 6.1	
		Naı	me ester <b>X</b> .	
				[1]
	(c)	(i)	Ester <b>Y</b> has the structural formula HCOOCH <sub>2</sub> CH <sub>2</sub> CH <sub>3</sub> .	
			Name the alcohol and the carboxylic acid used to make ester <b>Y</b> .	
			alcohol	
			carboxylic acid	
		/!!\	Chata the media cular former la of catan V	[2]
		(ii)	State the molecular formula of ester <b>Y</b> .	
				[1]
	(d)	Est	er <b>Z</b> has the molecular formula $C_4H_8O_2$ .	
		Sta	te the empirical formula of ester <b>Z</b> .	

(e) Polymers containing ester linkages are known as polyesters.

Polyamides are another type of polymer. Nylon is a polyamide.

The structure of nylon is shown in Fig. 6.2.

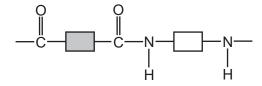

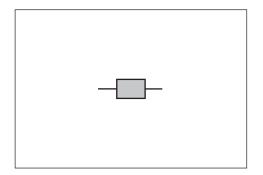

Fig. 6.2

- (i) State the term used to describe the type of polymerisation used to produce polyesters and polyamides.
- (ii) Complete Fig. 6.3 to show the structures of the monomers used to produce nylon. Show all of the atoms and all of the bonds.

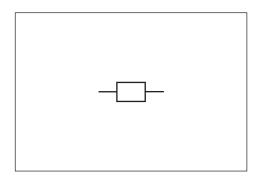

Fig. 6.3

[2]

**(f)** Naturally occurring polyamides are found in food.

(i) State the name given to naturally occurring polyamides.

.....[1]

(ii) Name the type of monomer which forms naturally occurring polyamides.

......[1]
